

Dr Pierre Deprez, head of clinic, Department of gastroenterology. He Has traveled a lot, from Tokyo to Hyderabad (India) via Boston.

The purpose of all these visits was to learn new techniques of endoscopic interventions on the digestive system, in particular the resection of superficial tumors of the esophagus, stomach and colon. He was able to observe about fifty of these mucosectomies in the service of Prof. Omata and Dr. Yahagi, pioneers in this field. He also learned various techniques of intervention on the pancreas, endoscopies performed through the wall of the stomach, etc. The result is that currently, Cliniques Saint-Luc have become pioneers in Europe in some of these interventions.
